Seismic Data Analysis Techniques In Hydrocarbon Exploration

Synopsis

Seismic Data Analysis Techniques in Hydrocarbon Exploration explains the fundamental concepts and skills used to acquire seismic data in the oil industry and the step-by-step techniques necessary to extract the sections that trap hydrocarbons as well as seismic data interpretation skills. It enhances the ability to interpret seismic data and use that data for basin evaluation, structural modeling of a fault, reservoir characterization, rock physics analysis, field development, and production studies. Understanding and interpreting seismic data is critical to oil and gas exploration companies. Arming young geoscientists with a reference that covers the key principles of seismic data analysis will enhance their job knowledge, skills and performance. A fundamental grasp of seismic data enhances employability and aids scientists in functioning effectively when working with seismic data in industry. Edited by a team of petroleum geoscientists with more than 30 years of experience in hydrocarbon exploration and data analysis at O&G companies. More than 200 figures, photographs, and illustrations aid in the understanding of the fundamental concepts and techniques used to acquire seismic data. Takes an easy-to-follow, step-by-step approach to presenting the techniques and skills used to extract the geologic sections from acquired seismic data. Enhances the geoscientist's effectiveness when using seismic data for field development and other exploration and production studies.

Customer Reviews

Although the book is a good first effort, I can only recommend it to a novice level reader.

Good effort but it really for Novice Geophysicist. Probably someone who just entered the program or geologist who want to gain an insight into Geophysics. Mid career should not expect much from this.

This book was recommended by my Professor this semester for the course in Engineering and Exploration Geophysics and I must say - This is the best book I've seen around. The book talks to the reader - A job well done.
