# Non-Hodgkin Lymphoma (Cancer Book 14)

## Synopsis

Definition of non-Hodgkin lymphoma: Any of a large group of cancers of lymphocytes (white blood cells). Non-Hodgkin lymphomas can occur at any age and are often marked by lymph nodes that are larger than normal, fever, and weight loss. There are many different types of non-Hodgkin lymphoma. These types can be divided into aggressive (fast-growing) and indolent (slow-growing) types, and they can be formed from either B-cells or T-cells. B-cell non-Hodgkin lymphomas include Burkitt lymphoma, chronic lymphocytic leukemia/small lymphocytic lymphoma (CLL/SLL), diffuse large B-cell lymphoma, follicular lymphoma, immunoblastic large cell lymphoma, precursor B-lymphoblastic lymphoma, and mantle cell lymphoma. T-cell non-Hodgkin lymphomas include mycosis fungoides, anaplastic large cell lymphoma, and precursor T-lymphoblastic lymphoma. Lymphomas that occur after bone marrow or stem cell transplantation are usually B-cell non-Hodgkin lymphomas. Prognosis and treatment depend on the stage and type of disease. Also called NHL. Estimated new cases and deaths from non-Hodgkin lymphoma in the United States in 2012:

Oncology > Cancer

## Customer Reviews

This gave me a slightly better sense of the problem. Obviously it's not exhaustive, but it's well worth the ninety - nine cents. Of particular use to me was the "Wait and See" discussion. It also pointed to other resources.

Has a lot of good info. All of it can also be found on the internet but this is a good place to start. Definitely let your family read it with you as it's a very fast read. This way everyone questions can be answered and your family can understand more about what your body is going through.

The information contained in the book was dated. Other than that, the book gave information that may be relevant if you have not visited with your Doctor.
