Customer Reviews

I would like to add one more book that is required of your time and mind when it comes to Deeper Learning, Project Based Learning, and anything that will help schools enhance education. This book has been waiting a long time for me to review and finally after crafting out some time to get back to blogging I am ready to introduce the book Make Learning Personal by Barabara Bray and Katheleen McClasky. The reason that I feel this book should be required reading for all educators is that the book brings up so many thinking points about how we learn and ideas that work best to reach our learners. I will be honest in that when I hear the phrase personal learning I get it, but I don't get it because I feel like the term is overused and everyone seems to have a slight adjustment to the meaning. Additionally, the phrase is often linked to blended learning and flipped

classrooms which can either make you a fan or not based on your experience. When I started reading the book I was not sure if I would be sold on the idea or not. However, I was hooked right away in the preface when the following statement was read, "personalizing learning is not something someone does to a learner." This phrase is the backbone of what I believe with education and one of the main reasons I push for student voice, makerspaces, project based learning, and deeper learning. Learners should be driving their education and schools should not be thrust upon them. "Learning is personal" I think this statement is one that everyone would agree with so the question becomes how do we do this and make it happen in schools across the nation?
